OBJECTIVE

An ambitious Cybersecurity specialist seeking to leverage strong hands-on experience in Information security, incident response, managing SIEM systems, and analyzing network logs to protect Information, organization assets, and contribute to an effective SOC team.

EDUCATION

Bachelors of IT (cybersecurity track), Arab East Colleges

Graduated: 2026

EXPERIENCE

Application Security & QA Tester at National Housing Company (NHC) Waed program

Jul 2025-Dec 2025

- Evaluated 4 security and data privacy issues identified within the Ejar platform; developed and delivered detailed technical reports with remediation recommendations to the team lead.
- Audited and tested the interfaces of the Sallem platform, successfully discovering an Unrestricted File Upload vulnerability, alongside identifying and documenting UI/UX flaws and discovered 2 issues related to switching normal and dark mode and issue about pop-up.

PROJECTS

DFIR-Auto | Remote Evidence Collection Automation Tool (Python)

- Developed an automated DFIR tool using standard libraries to capture volatile RAM and extract remote Windows event logs securely.
- Implemented real-time SHA-256 cryptographic hashing to lock the chain of custody and ensure legal evidence integrity.

Splunk SIEM & Incident Detection Lab

- Built and configured a hands-on SIEM lab using Splunk Enterprise on Kali Linux to establish log monitoring.
- Simulated a Brute Force attack by generating 5 authentication events, and developed specific SPL queries to aggregate, detect, and isolate the 1 malicious source IP and the targeted user account.

Linux Incident Response & Forensic Automation Framework

- Developed an automated Bash script to accelerate incident response triage by programmatically collecting and analyzing 5 critical categories of Linux host artifacts (processes, network connections, user histories, hidden directories, and file system timelines).
- Engineered anti-forensics features to instantly detect history wiping (.bash_history) and stealth structures, automating timeline generation for modifications within a 24-hour window to export a standardized forensic report (forensic_report.txt) for SOC teams.

SKILLS

Technical skills:

- Python
- SIEM
- Bash
- MS office, Power BI
- Windows, Linux
- Wireshark

General Skills:

- Communication and presentation
- Team Collaboration
- Adaptability
- Time Management
- Documentation

LANGUAGES

- Arabic
- English
